Profile Analysis

HOW TO DO PROFILE ANALYSIS? - WHAT IS NEEDED AND WHAT DO WE HAVE? - WHAT IS IMPORTANT AND HOW WE WILL EXTRACT THEM.

Not all of these will be available depends on if the person has that Information Public or Private or He has not provided any Info related to that. Like the person has no Bio or Location made public or not written at all in his profile etc.

Need to Make graphical representation of whatever available out of these. Not to overfeed User, User will be given categories to let him select whatever he wants to see in a profile analysis. Whenever he searches for a profile **if that profile is public**, User will be given Basic details such as name, username (and first few from the list below) and then be given categories to select what data he wants to be seen.

- Name
- Username
- Verified or not? (Reason if any available)
- Profile Picture
- Cover Picture
- Following
- Followers
- Joining Date > Age of Account
- Date of Birth
- Bio (About Me)
- Location
- Website/Link (if any)

- No. of Tweets made > User Tweets (Overall Tweets) **and** CDN Content Size
(This is for Tweets with Images attached)
- No. of Tweets Replied to > User Replies
- No. of Likes received > Likes per tweet **and** Favorites to Tweet Ratio
- No. of Likes given > User Favorites
- No. of Retweets Made > User retweets
- No. of Retweets received > Retweets per tweet
- No. of Mutual Followers (2 accounts follow each other, Friends) > Followers to Friend Ratio
- Tweets in last 7 days > Tweet Frequency
- Tweets in last 30 days
- Tweet Time Frequency. A graph or something that shows what time person usually tweets etc.
- Most Interacted (Liked, Retweet, Replied) Tweet in last 7 days
- Most Interacted (Liked, Retweet, Replied) Tweet in last 30 days
- Devices Used by Twitter Account > with Source Count **and** Activity

These are Some of the parameters that can help us in our goal...
